

Headcount by Service Area of Residence and Zip Code

2015-2018

Prepared by:

SDCCD Office of Institutional Research and Planning

December 2018

Table of Contents

Summary.....2

All Colleges..... 4

City College/ECC..... 6

Mesa College..... 8

Miramar College..... 10

Continuing Education..... 12

Summary

- Overall, there has been little change in headcount by zip code in the past three years.
- In 2017/18, the greatest proportion of students across **all colleges** lived outside of the SDCCD service area (42%). This is likely due to online classes, which have seen significant enrollment increases in the last few years. Students from the City College service area comprised 29% of student headcount from all colleges, followed by students from the Mesa College service area (19%), and students from the Miramar College service area (11%). These proportions are relatively consistent with the last two academic years, although the proportion of students from the Miramar College service area increased by 1% since 2016/17. When examining headcount from the SDCCD service area broken down by zip code, the highest proportion of students were from 92126 (6%), which is within the Miramar College service area.
- Students from the **City College** service area made up the greatest proportion of students attending City College in 2017/18 (44%), followed by students living outside of the service area (40%), students from the Mesa College service area (11%), and students from the Miramar College service area (4%). These proportions are consistent with the last two academic years, although headcount from all service areas declined in the past year. It is notable that City College is the only college in the District with the greatest proportion of students from within its own service area. When the data are examined at the zip code level, the highest proportion of students attending City College live in the 92105 zip code (7%), which is in the City College service area. City College is also the only college with the greatest proportion of students from a zip code that is not the zip code of the college's address.
- The greatest proportion of students attending **Mesa College** in the last academic year were from outside of the SDCCD service area (36%), followed by students from the City College service area (28%), students from the Mesa College service area (27%), and students from the Miramar College service area (9%). While these proportions have remained relatively stable since 2015/16, student headcount from outside the service area and the City College service area increased in 2017/18. Increases in students from outside of the service area are likely influenced by online courses. Students living in the 92111 zip code within the Mesa College service area comprised the greatest proportion of students attending Mesa College at the zip code level (6%).
- Half of the students attending **Miramar College** in 2017/18 lived outside of the SDCCD service area. The next greatest proportion of students live in the Miramar College service area (20%), followed by students from the City College service area (17%), and the Mesa College service area (14%). These trends have remained mostly stable since 2015/16, however, it is notable that the

proportion of students attending Miramar College from the City College service area has increased by 1% in 2016/17 and 2017/18. Miramar College also has the greatest proportion of students attending from outside of the SDCCD service area, although this proportion decreased from 51% to 50% in 2017/18, possibly due to the opening of the Palomar College South Education Center located in Rancho Bernardo in Summer 2018. The highest proportion of students attending Miramar College at the zip code level live in the 92126 zip code within the Miramar College service area (12%), although this proportion decreased by 1% in both 2016/17 and 2017/18.

- The greatest proportion of students attending **Continuing Education** in 2017/18 live outside of the SDCCD service area (21%), followed by students from the West City service area (18%), Mid-City service area (18%), North City service area (17%), Centre City service area (15%), ECC service area (9%), and the Chavez service area (2%). The proportion of student headcount from the Chavez and North City service areas both increased by 1%, and the proportion of students from the West City service area decreased by 1% in 2017/18. The proportion of students from outside of the service area increased by 1% in both 2016/17 and 2017/18. The highest proportion of students attending Continuing Education from within the SDCCD service area live in the 92105 zip code (9%), which resides in the Mid-City service area. This has remained consistent since 2015/16.
